

Buffalo Medical Group MRI Service Awarded Accreditation

WILLIAMSVILLE, NY – The American College of Radiology (ACR) has awarded Buffalo Medical Group's Magnetic Resonance Imaging (MRI) service a three-year accreditation for maintaining the highest quality imaging standards.

BMG's MRI service performs about 2,000 procedures annually at its 425 Essjay Road location in Williamsville.

"MRI accreditation involves a rigorous review process and is not easily attainable," remarked Eileen A. Leary, BMG chief operating officer. "This achievement recognizes the competence, dedication and commitment to quality by our MRI physicians and the staff, and the leadership of Michelle Roesler, director of BMG's Imaging Services Department."

Leary noted that ACR accreditation is voluntary and holds MRI departments to the highest standards in quality, reporting and technology. "It indicates that our MRI personnel are well qualified, through education and certification, to perform and interpret medical images, and that our MRI service meets or exceeds nationally accepted quality assurance and safety guidelines," Leary added.

ACR, the nation's leading organization representing radiologists, radiation oncologists, interventional radiologists, and medical physicists, advocates on behalf of its members to advance the profession and ensure the highest quality radiological care for patients.

Founded in 1946, Buffalo Medical Group is among the oldest and largest multi-specialty physician practice groups in New York State with approximately 110 Specialists and sub-specialists. Annually, BMG records more than 400,000 outpatient visits at its main locations in Buffalo, Williamsville and Orchard Park, and 24 satellite sites throughout Western New York.
